Bony outlines of the paranasal sinuses are well visualized and preserved.

No evidence of deflected nasal septum is seen.

The orbital margins are intact and show no evident lesion.

Visualized bony skull is intact.

**Please correlate clinically.**Dr. Izzat Fatima  
Sonologist

For referring physician and or to furnish a second opinion, hard copy images have been handed over to the patient. Radiology image interpretation may vary from radiologist to radiologist. Repeat study with variable radiation dose, position, contrast or additional viewing on other modality before and after clinical correlation may be needed. For any query or confusion, don't hesitate to contact our reporting doctor or diagnostic center.
